Motivated Front End Software Engineer with 5 years of experience working in cross-functional teams and leading end to end products in Bing with millions of users. Proven track record in increasing user retention and product quality based off analysis of customer facing metrics.

EXPERIENCE

MICROSOFT | REDMOND, WA

Software Engineer II, Level 61 | Jan 2024 – PRESENT

- Lead Engineer of Bing Dictionary responsible for improving product quality and increasing user engagement. Increased daily active users by 33%, achieving over 1.5 million users.
- Modernized UI look in response to analysis performed on user feedback surveys and metrics leading to an 8% increase in internal user satisfaction metrics.
- Collaborated closely with backend and design teams to revise data schemas and migrate dictionary, recipe, and timezone UI layouts to a unified Bing experience.

Software Engineer I, Level 60 | Jan 2022 – Jan 2024

- Successfully reduced latency in rendering time of dictionary product by 17ms and client-side errors by 79% while updating design to a more modern UI experience.
- Introduced code reusability and reduced HTML size by 900 bytes through the proposal and development of a full-stack feature for dictionary product, utilizing REST APIs and NoSQL databases.

Software Engineer I, Level 59 | Aug 2020 - Jan 2022

- Expanded triggering models to support 10 new user languages for dictionary product thereby increasing coverage by 25% in international markets.
- Led mentoring program for undergraduate students to encourage underrepresented groups in technology to gain resilience and confidence in their career.
